

# Claims

[c1] What is claimed is:

1. A device,  
comprised of a speaker mounting ring in which a  
speaker is affixed;  
that fits into a housing in a manner to allow angular and  
circular movement;  
constructed of a semi-pliable material to allow modifica-  
tion for mounting of various speaker sizes and types,  
and installation of the device into various enclosures.

[c2] 2. Device in claim 1, to be used for aiming speakers at a  
listeners ear in any listening environment, such as an  
automobile or other motor vehicle, watercraft, desktop  
speaker enclosure, floor standing speaker enclosure,  
wall mounted speaker or wall mounted speaker enclo-  
sure, or any surface in which a speaker can be mounted.

[c3] 3. Device in Claim 2, where speaker mounted to the  
speaker mounting ring can be manually adjusted by  
means of rotating or angling the speaker mounting ring  
within the housing.

[c4] 4. Device in claim 3, where position of speaker mounting

ring can be fixed to the housing to hold speaker mounting ring firmly in place.
